

## Simple and Effective Waterproofing for Wet-Area Wall Penetrations.

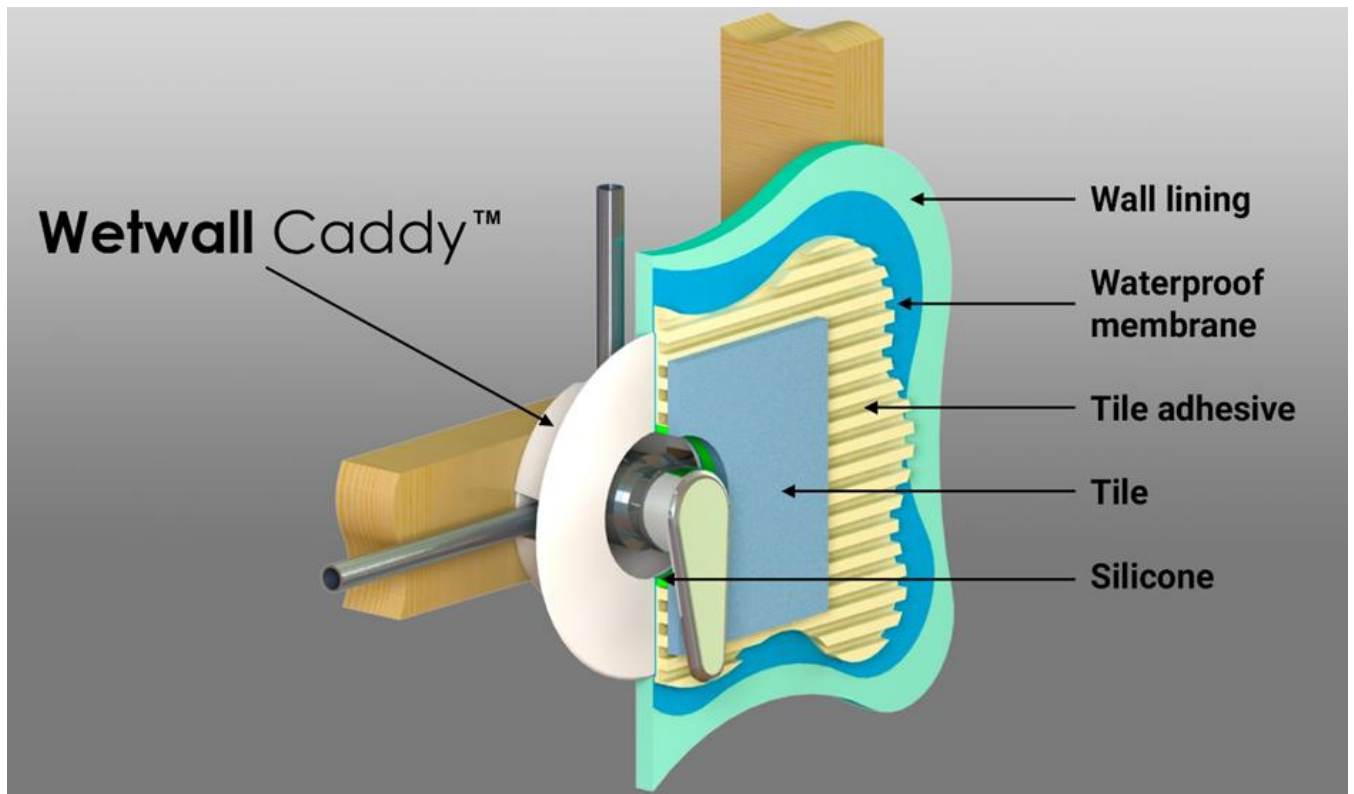

**Chris Withers**

Independent Waterproofing Consultant WMAI (NZ) Chair

March 20, 2025

The **Wetwall Caddy** from Aquatite is a very simple device that comprises of a cup and flange that encompasses the body of a shower mixer or tap and creates a seal in the wall lining for the hole that is created, when installing these items.

The function of the [Wetwall Caddy](http://www.wetwallcaddy.nz) is very simple, it will prevent any water which can penetrate past the wall lining and enter the wall cavity, either from water ingress or hardware failure, from causing water damage to occur by trapping the water and dispersing it back out the front of the shower mixer or tap and down the face of the finished wall surface.

All of the technical information, specification documents and installation information is available to view and download from the Aquatite website [www.wetwallcaddy.nz](http://www.wetwallcaddy.nz)

*"Did you know that tapware manufacturers require an access hole to be left in the wall lining to allow for easy access back into the body of the shower mixer, for servicing or replacement of parts without damaging the existing finished surfaces. This is also a requirement for warranty purposes and failure to comply could potentially void any warranty of the tapware for the Homeowner."*
